

# General module introduction — tutor notes

Use these notes for an introduction at the beginning of the section:  
*Design & Plan Blocks.*

To start the module, talk to the students generally about the main things they will learn and what they will do in each section:

- Work out the type and the amount of blocks and mortar they need
- Fit blocks together and keep the wall level and square
- Lay blocks with mortar

## **Explain**

Explain that in the module *Introduction to Blocks* they learned all about types of blocks and what they are used for.

In this module they will first work with dry blocks to see how they can fit together and how to keep them straight and level.

Finally they will build a wall with blocks and mortar.

Then move into workbook section *Design & Plan Blocks.*
