

Example of evidence requirements and gathering techniques for a unit/ competency on set out and assembly of cabinets, showcases and wall units

Evidence requirements	Evidence gathering technique
<p>Materials are selected and prepared to design and specification requirements for components.</p> <p>Length and joint details are transferred from set-out to component material and each checked in preparation for use with machinery.</p> <p>Set-out material is marked for appropriate identification of components.</p>	<p>A work-related practical task in a simulated environment where a number of different specifications are provided, and the learner is required to select the necessary materials from a supplied inventory and mark them out to specification in preparation for working with them using machinery.</p>
<p>Drawer components are assembled to specifications, with bottoms fitted and fixed.</p> <p>Runner types for the drawers are determined and installed to specified dimensions and manufacturer's specifications.</p> <p>Drawers are installed with specified clearances.</p>	<p>A workplace or work-related observation of performance where pre-cut components are assembled in the correct order and, with appropriate techniques, used to ensure the finished product is to specifications and fit for purpose.</p>
